

1. Creation of a collection of permanent slides of parasites and publication of the Atlas of Human Parasites

Principal investigator: prof. RNDr. František Ondriska, PhD.

Co-investigators: MVDr. Alžbeta Kaiglová, PhD.

Mgr. Kamila Bírová

The aim of the project is to create a collection of permanent specimens and to write the Atlas of Human Parasites. To meet the project goal, modern laboratory methods will be used for direct evidence of parasites and their developmental stages from biological samples.

The collection of permanent human parasite preparations and their propagation stages and Atlas of human parasites are currently lacking as study materials as well as a significant diagnostic aid in practical applications. The realization of this project will be used for the realization of diploma and dissertation work in the field of human parasitic infections for students of accredited study fields Laboratory Investigation Methods at TU in Trnava, Systematic Biology, Biology and Parasitology at the Faculty of Natural Sciences of Comenius University in Bratislava as well as parasitology studies other Slovak universities. The text materials will also be suitable for teachers of primary and secondary schools as part of their further education.
