

**Mgr. Radoslav Kulich** – works as an internal doctoral candidate at the Department of Laboratory Investigation Methods in Health Care at the Faculty of Health Sciences of the University of Trnava, where he completed his master's degree in 2024. He is involved in teaching the courses Pathological Anatomy and Histology, as well as conducting practical classes in Histology. From 2021-2024, he worked as a medical laboratory technician in the Department of Clinical Microbiology. As a part of his PhD studies, he deals with immunohistochemical investigation of new diagnostic-predictive markers in testicular germ-cell tumors processed by tissue microarray method and their subsequent correlation with clinicopathological characteristics in patients who do not respond to standard treatment.

**Born:** 1999
